SUMMARY

Data analyst with 7 months of internship experience building BI solutions for real clients. Worked with messy, real-world datasets end-to-end – from raw SQL queries and data cleaning all the way to dashboards that business teams use daily. Comfortable across SQL, Python, Power BI, and Tableau. Looking for a full-time data analyst or data scientist role where I can work with large-scale data and help drive decisions with numbers, not gut feel.

TECHNICAL SKILLS

SQL & Python	SQL (MySQL – window functions, CTEs, subqueries, joins), Python (pandas, NumPy, matplotlib, seaborn, scikit-learn, Jupyter)
BI & Viz	Power BI (DAX, Power Query, Star Schema data modeling), Tableau (LOD expressions, calculated fields), Excel (pivot tables, VLOOKUP, Power Query)
Analytics	EDA, A/B testing, statistical analysis, regression modeling, data cleaning & wrangling, KPI definition, cohort analysis, data storytelling
Cloud & Tools	AWS (S3, EC2 basics), Git, relational data modeling, agile workflows

EXPERIENCE

Ventar – Data Analyst Intern

Oct 2025 – Apr 2026

- Wrote SQL queries (CTEs, window functions) against MySQL to extract and clean data from 4+ client databases; cut data prep time by ~40% with reusable query templates.
- Built 5+ Power BI dashboards for sales and ops teams using DAX measures and Star Schema models; reports loaded ~30% faster after switching from flat tables to proper dimensional models.
- Ran EDA in Python (pandas, seaborn) on client datasets to find trends and anomalies; presented weekly findings to non-technical stakeholders in plain language with charts.
- Built Tableau dashboards with LOD expressions for 2 client projects to handle aggregation across different time granularities (daily, weekly, monthly).
- Partnered with business and dev teams to define KPIs from scratch for a new client – mapped raw transaction data to business goals and set up the Excel reporting layer before migrating it to Power BI.
- Documented data models, metric definitions, and dashboard logic so other team members could maintain reports without needing to ask each time.

PROJECTS

Sales Analytics Dashboard (Power BI, SQL, MySQL)

2025

- Built a full client-facing Power BI dashboard pulling from MySQL; used window functions and CTEs to compute rolling averages, MoM growth, and cohort retention – metrics the team had been tracking manually in Excel.
- Modeled the data in a Star Schema so new product/region dimensions could be added without breaking existing DAX measures.

Customer Churn EDA (Python, pandas, scikit-learn)

2025

- Ran end-to-end EDA on a 50k+ row dataset; used statistical analysis and correlation mapping to identify 5 key churn drivers.
- Built a logistic regression model with scikit-learn to segment at-risk customers; packaged the whole thing in a Jupyter Notebook with clear markdown for non-technical readers.

Personal Portfolio Website (HTML, CSS, JS, JSON)

2025 – Present

- Designed a data-driven portfolio site with a projects grid, filterable certifications page, and experience timeline – all content loaded from structured mock JSON, built responsively from scratch.

EDUCATION

Dhole Patil College of Engineering, Pune

2022 – 2026 (Expected)

Bachelor of Engineering – Information Technology

CERTIFICATIONS

Data Analytics in Excel · Data Analysis Certification · Agile Analysis Certification
